Normally I draw a solid slab, it's a lot quicker to create the table or cupboard.

With Ply it works 100%, but sometime the client requests dimensional lumber

500.0mm

800.0mm

3.3 Lengths of 800x150 laminated

So if OCL could calculate, when the component is assigned a dimensional lumber material

500.0mm

800.0mm

3.3 Lengths of 800x150 laminated
